Abstract

(Abstract)

(Problem)

It is to provide a cell useful as a host cell for the production of a glycoprotein which can control the sugar chain structure of the glycoprotein, especially, a cell capable of producing an immunologically functional molecule of which effector function is controlled, a method for producing an immunologically functional molecule using the cell, an immunologically functional molecule produced by the production method, and their use.

(Means for solution)

A cell for the production of a glycoprotein such as an immunologically functional molecule or the like, a method for producing an immunologically functional molecule using the cell, an immunologically functional molecule, and use thereof.
